

## **WAIVER OF RESPONSIBILITY**

### **DLT and DVD-R Input Source Material**

CD Solutions offers a “test disc” for all replication orders at no additional charge. The purpose of the test disc process is to allow the customer to view and verify the content, navigation and play-ability of a DVD product prior to pressing the complete order.

These “test discs” are highly recommended for all DVD products. The following waiver is required if a customer elects to manufacture a DVD order bypassing the production and approval of a “test disc”. CD Solutions fully guarantees the quality of the DVD’s we manufacture but cannot be held responsible for the quality of the disc content, the disc navigation or function of the various features of the DVD in different drives.

In addition this waiver releases CD Solutions Inc. of any responsibility for any play-ability problems with DVD-R media on some drives which might be repeated on replicated discs. It is recommended that DVD-R input source discs be tested on as many different drives as possible before sending them in to our replication facility
