Business Card Cd's  
supported (Optional)  
Print 2361 full Cd's on  
one ribbon (Black  
only)

*Durable Text!*

*Professional!*

*Rugged!*

### *Feature Rich!*

In-house printing doesn't have to be a chore! The PowerPro™ thermal printer will print on any generic lacquer surface media, print absolutely beautiful text graphics, and comes complete with label-creation software. At 600 x 300 dpi, the PowerPro™ is the highest-resolution thermal CD printer available today. It's also very fast at just 5 to 10 seconds per disc of actual print time (depending upon print coverage and in monochrome print mode). The PowerPro™ thermal printer will keep up with virtually any high-volume, production-printing task!

### *Leave A Lasting Impression!*

Looking for durable printing that does not rub off while handling the disc? The PowerPro™ has the answer! The thermal transfer process will produce a disc that leaves a lasting impression for years to come! Incredibly crisp text and logos on your discs means that you can finally send out discs that look professionally made. How's that for in-house control!

### *Eliminate Frequent Ribbon Changes!*

Time is money and you don't want to tie up either changing ribbons on a printer! PowerPro™ has solved that dilemma by offering a larger, long-lasting ribbon. You can print 2361 full Cd's on one ribbon, or 4000 - 6000 discs on partial coverage images! Money saving ideas that produce results!
